

Project Spotlight: State Government Command Center

Lead Consultant: John Magrini
Radiant Technology

The Challenge: Precision Under Pressure

When a state government agency faced a non-negotiable deadline for a major public event, they needed more than just hardware — they needed a mission-critical visual interface. The requirement was a **2x2 video wall** capable of managing eight distinct data sources with zero room for technical hesitation.

The Execution

To guarantee success under a firm deadline, Radiant implemented a rigorous three-step readiness protocol:

- **Stakeholder Review:** Pre-installation alignment to confirm functionality.
- **The “Dress Rehearsal”:** A full system test-run 48 hours before the event.
- **Onsite Support:** Live technical coverage during the event’s peak hours.

The Result

The system didn’t just meet the deadline — it transformed operations. By replacing manual workarounds with **real-time visibility**, the client improved response times and increased confidence in the technology.

The Strategy

Led by **John Magrini**, Radiant focused on a consultative approach to ensure the technology matched the pace of real-time decision-making.

- **Operational Readiness:** Early alignment on how the team would actually use the system during a crisis.
- **Intuitive Control:** Ability to toggle between 8 sources (displaying 4 simultaneously), including live websites and environmental sensors.
- **Aesthetic Continuity:** A polished, branded interface for “idle” times to maintain a professional environment.
